AVAILABILITY & PREFERENCES

I am pursuing Full-time roles where I can commit fully to one team. I am flexible across Remote and Hybrid setups depending on team needs. I would consider relocating for the right long-term opportunity if the role and team are a strong fit.

When scheduling recruiter or hiring-manager conversations, during weekday mornings tends to work best on my calendar.

Looking to move into a principal engineering role at a high-growth fintech company where I can own platform reliability and mentor junior engineers.

My primary professional credential stays valid through 2027-03-31, and I am targeting total annual compensation around 120000 for the next step in my career.

If my main line is unavailable, you can also reach me at +1 415 555 0142 or sarah.work@protonmail.com. A wider collection of work and references lives at <https://github.com/sarahjohnson>.

PROFESSIONAL SUMMARY

Backend software engineer with 6 years of experience building distributed payment systems at scale. Deep expertise in Python, Go, and AWS cloud infrastructure.
